                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes human lung tumour proteins. Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABJ48959 to ABJ49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              adababarcecececrecres da basa de la contracta

The present invention describes isolated human lung carcinoma polymucleotides (I) and polypeptides (II). (I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polymucleotide that hybridises to the oligonucleotide to a predetermined cut-off value, and desermining the presence of a cancer in contacting the amount of polymucleotide that hybridises to the oligonucleotide to a predetermined cut-off value, and desermining the presence of a cancer in the patient. (I) and (II) are useful in pharmaceutical compositions, e.g. vaccines. (I) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer. ABQ22146 and ABBPE1866 to increase.
                                                                                                   Novel lung carcinoma polynucleotide sequences and polypeptides encoded by the polynucleotides, useful in pharmaceutical compositions such as vaccines and as markers to indicate the presence of lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 156
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          521

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         821
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes human lung tumour proteins. Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL48959 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

The present invention describes human lung tumour proteins. Human lung tumour proteins and polynuclectides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynuclectides, antibodies, proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. AB48959 to AB49300 and AB74946 to ABB75070 represent sequences used in the exemplification of the present

Sequence 1743 BP; 527 A; 406 C; 418 G; 392 T; 0 U; 0 Other;

treating

useful for

Polynucleotides encoding lung tumor polypeptides, lung cancer or stimulating an immune response.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A predominantly nuclear protein affecting cytoplasmic localization of beta-actin mRNA in fibroblasts and neurons.";
J. Cell Biol. 156:41-52(2002).
-!- FUNCTION: Binds to a 54-nuclectide localization signal (the zipcode) found in the 3' untranslated region of beta-actin mRNA and may play a role in its localization.
-!- SUBCELLULAR LOCATION: Predominantly nuclear. Also detected in the

                                                                       "Cooperative assembly of an hnRNP complex induced by a tissue-specific homolog of polypyrimidine tract binding protein."; Mol. 20:7459-7479(2000).

1. FUNCTION: Binds to the dendritic targeting element and may play a complex that binds to the dendritic targeting element and may play a complex that binds to the downstream control sequence (DCS) of the pre-mRNA. Mediates exon inclusion in transcripts that are subject to tissue-specific alternative splicing. May interact with single-stranded DNA from the far-upstream element (FUSE). May activate
                                                                                                                                                                                                                                                                                            and HNRPHI.

SUBCELLULAR LOCATION: Nuclear. A small proportion is also found in the cytoplasm of neuronal cell bodies and dendrites (By similarity).
                                                                                                                                                                                                                                                                               Part of a ternary complex containing FUBP2, PTBP1, PTBP2
                                                                                                                                                                                                                                                                                                                                                                       TISSUE SPECIFICITY: Detected in neural and non-neural cell lines. SIMILARITY: Contains 4 KH domains. CAUTION: Ref.3 sequence differs from that shown due to numerous

"Molecular characterization of MARTAL, a protein interacting with the dendritic targeting element of MARTAL, a protein interacting with the dendritic targeting element of MARTAL, a protein interacting with the J. Neurochem. 82:1039-1046(2002).

-I- FUNCTION: Part of a ternary complex that binds to the downstream control sequence (DCS) of the pre-mRNA. Mediates exon inclusion in transcripts that are subject to tissue-specific alternative splicing. May interact with single-stranded DNA from the faruspaream element (FUSE). May activate gene expression (By similarity). Binds to the dendritic targeting element and may play a role in mRNA trafficking.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            a role in mRNA trafficking.
-!- SUBGNIT: Part of a ternary complex containing FUBP2, PTBP1, PTBP2 and HNRPH1 (By similarity).
-!- SUBGELLULAR LOCATION: Nuclear. A small proportion is also found in the cytoplasm of neuronal cell bodies and dendrites.
-!- SIMILARITY: Contains 4 KH domains.
                                                                                                               SEQUENCE OF 73-87; 89-108 AND 475-486, SUBCELLULAR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           preferentially to oliging dc.
SUBCELLUIAR LOCATION: Loosely bound in the nucleus. May shuttle between the nucleus and the cytoplasm.
TISSUE SPECIFICITY: Abundantly expressed in skeletal muscle, thymus and peripheral blood leucocytes while a lower expression is observed in prostate, spleen, testis, ovary, small intestine, heart, liver, adrenal and thyroid glands.
PTM: PHOSPHORYLAPED. THE NON-PHOSPHORYLATED FORM(S) EXHIBITED THE STRONEST POLY(RC)-BINDING ACTIVITY.
STRONEST POLY(RC)-BINDING ACTIVITY.
CAMPILON: There is probably a frameshift error in the nucleotide sequence of Ref.3.
                                                                                                                                                                                                                                                                                                                                                                                                            TISSUE=Lymphocytes;

"Nova regulates GABA(A) receptor gamma2 alternative splicing via a
distal downstream UCAU-rich intronic splicing enhancer.";
MOL. Cell. Biol. 23:4687-4700(2003)
--- FUNCTION: Functions to regulate alternative splicing in neurons binding pre-mRNA in a sequence-specific manner to activate exon
binding pre-mRNA in a sequence-specific manner to activate exon
inclusion. It binds specifically to the sequence UCAUY. Most
likely acts to activate the inclusion of exon E3A in the glycine
receptor alpha-2 chain and of exon E9 in gamma-aminobutyric-acid
receptor agamma-2 subunit via a distal downstream UCAU-rich
intronic splicing enhancer.
--- SUBCELIULAR LOCATION: Nuclear.
---- DISERSE: Defects in NOVA1 leads to neuronal death in spinal and
